

MXD3G

Mytrex's systematic approach to designing PERS separates us from the competition. The MXD3G is designed by Mytrex engineers whom also develop monitoring center software and hardware. Mytrex is intimately involved with day-to-day costs, efficiencies, and liabilities associated with a medical alert company and applies that knowledge in every facet of our PERS designs. Therefore, the MXD3G is designed to be easily monitored, serviced, and maintained by any central station and/or PERS Provider.

Simply put, you will not find a better cellular based PERS.

MXD3G

THE MXD3G: Your answer to no landline.

The MXD3G is the first cellular medical alarm in the industry to provide a 3G cellular connection. The MXD3G is state of the art equipment, designed by Mytrex engineers. As more people get rid of their POTS lines and switch to other mediums of communication, the MXD3G will become more and more valuable to PERS dealers.

EASY INSTALLATION

- PHB Range Test Mode
- Monitor Mode
- Easy to Program Panic Buttons and Other Wireless Devices
- User Friendly Interface
- Voice Prompts and Messages

LOWEST COST OF OWNERSHIP

- Preprogrammed from the Factory
- Typically 5+ Years Before Battery Replacement
- 3-5 Year Panic Button Battery (Monitored)
- Built to Last
- Dealer Repairable (If Desired)

MXD3G FEATURES

- Telguard Patented Technology
- Voice Prompts in Two Languages
- Monitored Personal Help Button (PHB)
- More than 600 ft. Panic Button Range
- 60+ Hours of Backup Battery
- Over-Discharge Battery Protection
- Precise Battery Charging Algorithms
- 3G AT&T Network
- Superior Audio Quality
- Unsurpassed Voice Range
- Duplex & Simplex Voice Mode
- Private Labeling Available
- Monitored by Any Central Station- No Special Configurations Needed
- Audible Cellular Strength Notification
- Up to Two Medication Dispensers
- Provisioned for Smoke & CO Detectors
- Integrated Cellular- No Attachments Necessary
- FDA Registered
- Operational in US and Canada
